

Aswin Kumar P

Ph : +91 8438242159
Mail : aswinkumarpalani24@gmail.com
Location : Chennai
LinkedIn : [\(7\) Aswin kumar Palaninathan | LinkedIn](#)

Career Summary:

- **Data Engineer** with around **4+ years** of experience specializing in designing, implementing and optimizing data pipelines and systems.
- Proficient in leveraging a variety of technologies including **Bash, Pyspark, Hive, AWS S3, Data Bricks, Tera Data, Python, SQL** to extract, transform and Load (ETL) large-scale datasets for analysis and reporting
- Migrated **complex on-premises ETL workflows to scalable cloud platforms (Teradata cloud)**, enhancing **data processing speed by 50%**.
- Demonstrated proficiency in utilizing PySpark for loading and analyzing massive datasets efficiently. Skilled in building resilient and scalable data pipelines using PySpark to handle complex data transformations.
- Skilled in Data Warehousing with a focus on building ETL pipelines that deliver high-quality transformed data for data warehouse ingestion.
- Good understanding of NoSQL databases and hands on work experience in writing applications on NoSQL Hbase database
- Excellent communication & interpersonal skills with strong analytical, team building, problem solving, Ability to meet deadlines and handle multiple tasks, flexible in work.

Skills:

- Amazon Web Service : S3, Athena, Glue, EMR, EC2, Lambda
- ETL tools : Data Bricks, EMR, Glue & On-premises
- Big Data Analytics : PySpark, Hadoop, Hive, HDFS
- Programming : Python, SQL, Shell Script, .Net(c#), Bash
- Data Base : Oracle, MySQL
- Data Warehouse : TeraData, Red Shift
- Scheduling : AirFlow, Control-M, Cron
- Repository : GitHub
- Devops :Kubernetes, Concourse CI/CD

Education:

B.E Mechanical Engineering in Kumaran Institute of Technology, Chennai (2012 - 2016)

Professional Experience:

- Working as a Data Engineer in BBI (Jul 2025- Present)
- Working as a Data Engineer in Comcast (Jan 2023- May 2025)
- Worked as Associate in People Prime Worldwide Pvt ltd (July 2021- Jan 2023)

Project History:

COMCAST INDIA ENGINEERING CENTER | CHENNAI, INDIA

Products

Environment: PySpark, Databricks, Kubernetes, Teradata, AWS S3, Minio and Airflow, Bash

Responsibilities:

- Migrated extensive Bigdata workflow to Databricks, resulting in a 40% increase in data processing efficiency.
- Transferred a Cloudera Spark jobs to Kubernetes cluster, leading to enhanced performance and greater scalability.
- Performed spark performance tuning and optimized data pipelines to accelerate data ingestion speed and optimized resource utilization. This effort ensured timely delivery of insights and reports and reduced operational costs.
- Developed and optimized workflows in Databricks, enabling efficient querying and analysis of larger datasets, resulting in a 35% reduction in query response time.
- Collaborated with cross functional team to understand business requirements and design tailored data solutions to meet organizational needs.
- Actively participated in Code reviews and contributed to continuous improvement of coding standards and best practices.
- Migrated 30+ Teradata BTEQ components to PySpark jobs, leads to enhanced performance and reduced run time by 30%.
- Implemented CI/CD implementation using Concourse to automate the deployment process as well as the agile implementations.

Sub Application: Products - Xfinity Mobile Master Data (US)

- Implemented and configured Xfinity Mobile master data, encompassing mobile lines, offers, credits, service plans, protection plans, customers, equipment, accessories, and shipping details.
- Collaborated with product management to furnish critical data for informed decision-making.
- Utilized pyspark, teradata, datalake, onprem storage, airflow, Kubernetes, and other cloud technologies and tools to streamline processes and enhance operational efficiency.

Sub Application: Products - Swaps (US)

- Implemented Product Swaps to identify old device (Video, HSD, XH) customers, enabling targeted campaigns for device replacement.
- Utilized Product Swaps to segment customers based on old device types (Video, HSD, XH) and to customize campaigns for device upgrades.
- Leveraged Product Swaps to analyze and categorize old device (Video, HSD, XH) customers, leading to tailored campaigns for device replacement.

Sub Application: Products - Account Product Detail (US)

- Implemented and configured high critical comcast products, which give exact information about customers how they help us to generate revenue to company
- Collaborated with product management to furnish critical data for informed decision-making.
- Utilized pyspark, teradata, datalake, onprem storage, airflow, Kubernetes, and other cloud technologies and tools to streamline processes and enhance operational efficiency.

Health Care (US)

EMBLEM HEALTH | COGNIZANT | CHENNAI, INDIA

Environment : HDFS, Hive, SQOOP, Cloudera Manager, HUE, PySpark, Bash

Responsibilities:

- As we are working for health care client, which deals with data transformations, migrations with effective utilization of resources, At the start of our project we were using ETL tool such as informatica and data stage to meet the requirements from the clients.
- We were using Cloudera services for running jobs. Hive, beeline, Impala, spark shell was utilized for data analyzing, querying and automation purposes.
- Hive, beeline, Impala, spark shell was utilized for data analyzing, querying and automation purposes.
- Run deck scheduler was used to schedule jobs on daily basis and the parameters are set using a shell script where memory details can be customizable for later run.
- Actively involved in code review and bug fixing for improving the performance.
- Extended my knowledge on healthcare business to fulfill the needs of clients in more efficient way.

Banking

CIBIIL|TRANSUNION | CHENNAI

Environment : MSSQL, Pyspark, Bash, Cron, Python

Responsibilities:

- Gained exposure to banking data systems involving transactional and customer data, focusing on data transformation and validation use cases.
- Performed data extraction, transformation, and analysis using SQL on large structured datasets to support reporting and downstream processing.
- Utilized Linux for executing jobs, managing files, monitoring processes, and automating routine data operations using shell scripts.
- Developed and maintained Python scripts for data cleansing, transformation, and validation to ensure data accuracy and consistency.
- Worked on data migration and reconciliation scenarios, validating source-to-target data mappings using SQL queries.
- Assisted in query optimization, debugging, and performance tuning to improve data processing efficiency.
- Built understanding of banking domain concepts such as transactions, accounts, customer data, and data quality controls.
