

## Security Operations Manager

### Overview

The Security Operations Manager leads and continuously improves security operations across Exasol's cloud, infrastructure, endpoints, and SaaS environments, with a strong focus on AWS-based environments, incident response, and regulatory aligned security operations. The role owns day-to-day security operations, major incidents, and security initiatives. This role reports directly to the Information Security Lead and focuses on delivering measurable security improvements through projects, leadership, and cross-functional collaboration.

### Responsibilities

You will take on a leadership role in driving and continuously improving Exasol's security operations capabilities across cloud, infrastructure, endpoint, and SaaS environments within regulated European operating environments. This includes, but is not limited to:

### Required Qualifications

### Preferred Qualifications

### How We Work at Exasol

### About Exasol

#### Responsibilities (continued)

- Improving Exasol's vulnerability management processes, including triage, risk-based prioritization, remediation tracking, and reporting in line with EU regulatory expectations.
- Leading security incident response activities and acting as the primary escalation point for complex or high-impact incidents, including incident classification, regulatory notification preparation, and post-incident reporting aligned with DORA and NIS2.
- Improving visibility into threats and attacks through effective logging, monitoring, and detection capabilities that support regulatory incident reporting timelines.
- Leading major security initiatives and programs, such as data loss prevention (DLP), penetration testing, and security vulnerability remediation, supporting operational resilience requirements.
- Providing high-level technical oversight for the configuration, operation, and continuous improvement of security platforms and tools (SIEM, EDR/XDR, MDM, IAM).
- Improving cloud security, particularly in AWS environments, by applying security best practices and working closely with IT and engineering teams.
- Leading threat intelligence activities and assessing relevance from a European regulatory risk perspective.
- Supporting security architecture reviews and security-by-design principles.

- Supporting governance, risk management, and compliance activities (ISO 27001, DORA, NIS2).
- Leading information security awareness activities, including phishing simulations and training.

#### **Required Qualifications (continued)**

- Strong experience with AWS security services (CloudTrail, CloudWatch, GuardDuty, Security Hub, IAM).
- Experience interacting with European regulators or supervisory authorities.
- Accountable incident lead experience for EU-regulated incidents.
- Hands-on DORA and NIS2 incident handling experience.
- Strong SOC / security operations background with SIEM and EDR/XDR.
- Experience supporting EU regulatory audits (e.g., ISO 27001).
- Ability to translate regulatory requirements into security operations.
- Experience with threat intelligence or MITRE ATT&CK.
- Strong communication skills.
- German language skills are a plus.
