

SUMMARY

Senior Data Engineer with 5+ years of experience designing, building, and optimizing enterprise-scale data warehousing and analytics platforms across cloud ecosystems. Proven expertise in data modeling, database design, and ELT architectures supporting large, regulated, analytics-driven business environments. Strong hands-on experience with Snowflake, dbt, Python, and SQL, along with cloud-native services to deliver secure, scalable, and cost-efficient data solutions.

Demonstrated ability to lead data architecture and warehousing strategy, implement data governance, metadata management, and data quality frameworks, and optimize warehouse performance and cost. Experienced in enabling business intelligence and self-service analytics through well-modeled datasets and close collaboration with technical and non-technical stakeholders. Adept at partnering with cross-functional teams to rapidly prototype data products, BI tools such as Power BI, and drive data- support informed decision-making at scale.

EDUCATION

Bachelors of Engineering

Gujarat Technological University (GTU)

2020 - 2020

Senior Data Engineer

7984603877 @ nayanshewkani1998@gmail.com 9 Mumbai

EXPERIENCE

Senior Data Engineer

12/2024 - Present

M&G Global Services

Mumbai

- Owned and executed enterprise data warehousing initiatives on cloud platforms, leveraging Microsoft Fabric and OneLake as the centralized data platform, with Snowflake serving as the enterprise analytical warehouse for large-scale analytics and business intelligence use cases. BI tools used Power BI and drive data-support.
- Designed and managed dbt-based transformation and data modeling layers in Snowflake, enabling modular, version-controlled, and tested ELT pipelines aligned with analytics and reporting requirements.
- Developed scalable data ingestion and transformation workflows to deliver governed, analytics-ready datasets supporting risk, compliance, and enterprise business reporting.
- Implemented automated data quality, freshness monitoring, and reconciliation frameworks integrated with dbt and orchestration pipelines to ensure data reliability and trust.
- Designed AWS-based ingestion pipelines (SQL Server/Oracle / HDFS/S3 /Redshift) for enterprise analytics and downstream data science use cases
- Established data governance practices including metadata management, data lineage, and documentation standards to improve data discoverability, audit readiness, and regulatory compliance.
- Designed and built large-scale end-to-end data pipelines using Python, SQL, Spark, and Airflow to extract, cleanse, transform, enrich, and load risk and governance datasets.
- Optimized Snowflake warehouse performance and cost through query tuning, workload isolation, warehouse sizing strategies, and storage optimization.
- Enforced data security and access controls using cloud IAM principles, role-based access control (RBAC), and Snowflake security best practices in alignment with governance and compliance frameworks.
- Partnered with analytics, BI, IT, and business stakeholders to rapidly prototype data products, enable self-service analytics, and continuously evolve the data platform.
- Provided technical leadership by mentoring junior engineers, contributing to data architecture standards, and driving best practices across data engineering and analytics teams.

Data Engineer

01/2024 - 11/2024

EXL Service

Ahmedabad

- Built and maintained scalable cloud data pipelines using Azure and Microsoft Fabric, landing raw and curated datasets in OneLake and modeling analytical layers in Snowflake to support enterprise analytics, business intelligence, and reporting use cases.
- Designed and developed dbt models implementing dimensional, star-schema, and analytics-ready data models optimized for consumption by BI tools such as Power BI.
- Developed and maintained semantic, well-documented data models enabling performant Power BI dashboards and self-service analytics for business users.
- Authored reusable, production-grade SQL and Python transformation logic with embedded testing frameworks to ensure data accuracy, reliability, and maintainability.
- Implemented automated data quality, validation, and anomaly detection checks across ingestion and transformation layers to improve trust in analytical and BI datasets.
- Managed dataset documentation, metadata, and data lineage to support data governance, compliance requirements, and analyst and BI self-service.
- Partnered with product managers, analysts, and business stakeholders to deliver Snowflake-based data marts aligned with business KPIs and optimized for Power BI reporting and ad-hoc analysis.
- Supported data warehouse performance and cost optimization initiatives through query tuning, compute sizing, and storage optimization to ensure responsive BI workloads.

SKILLS

Python ·SQL ·Snowflake ·dbt ·
Microsoft Fabric ·Azure Data Factory ·
Azure Data Lake (OneLake) ·
Azure IAM / RBAC · Apache Airflow ·
Data Warehousing ·Data Marts · ETL ·
ELT · Batch Data Processing ·
Near Real-Time Data Processing ·
Data Ingestion ·Data Replication ·
Data Transformation ·
Dimensional Data Modeling ·
Star Schema · Snowflake Schema ·
OLAP · Power BI · Semantic Modeling ·
Data Quality · Data Validation ·
Reconciliation ·Metadata Management ·
Data Lineage · Data Governance ·
Secure Data Onboarding ·
Performance Tuning ·SQL Optimization ·
Snowflake Cost Optimization ·
CI/CD for Data Pipelines · Agile SDLC

KEY ACHIEVEMENTS

Won Team Excellence Award
2025 at M&G Global Services

Awarded Star of the H1-
2024 at EXL

EXPERIENCE

Data Engineering Analyst

02/2022 - 01/2024

Accenture

Remote

- Supported the development and enhancement of cloud-based data warehousing pipelines on Azure and Microsoft Fabric to enable enterprise analytics and business intelligence use cases.
- Implemented data ingestion and replication workflows to land structured and semi-structured data into Azure lakehouse and Snowflake environments under guidance from senior engineers.
- Developed SQL- and Python-based transformation logic and contributed to dbt models to deliver analytics-ready datasets for reporting and downstream BI consumption.
- Integrated on-prem SQL Server systems with Hadoop and AWS-based platforms for enterprise-wide analytics
- Assisted in designing and maintaining Snowflake data models, including fact and dimension tables, optimized for Power BI dashboards and analytical reporting.
- Performed data validation, reconciliation, and automated data quality checks to ensure accuracy, consistency, and reliability of production datasets.
- Contributed to batch pipeline orchestration using Airflow, supporting reliable, scheduled ELT processing across cloud data platforms.
- Participated in on-premises to cloud migration initiatives, supporting the transition of legacy datasets to Azure- and Fabric-backed analytical platforms.
- Supported performance troubleshooting and cost optimization efforts by analyzing Snowflake query performance, compute utilization, and storage usage.
- Collaborated closely with senior engineers, analysts, and business stakeholders to gather requirements, support Power BI reporting needs, and resolve data quality and modeling issues.

Data Analyst

06/2021 - 01/2022

Teksun

Ahmedabad

- Delivered analytics-ready datasets and interactive Power BI dashboards enabling data-driven sales and operational decision-making across business teams.
- Designed and maintained dimensional data models (facts and dimensions) and curated reporting layers optimized for Power BI performance and self-service analytics.
- Collaborated closely with business stakeholders to translate reporting and analytical requirements into structured, scalable data models and BI solutions.

Analytics Engineer

01/2020 - 05/2021

Freelancer
