Work Experience (7.6 years)

Senior Software Engineer	Opentext	Jun 2024 – Present
--------------------------	----------	--------------------

DRA (OpenText) – Directory Resource Administrator provides enterprise customers with the ability to delegate administrative privileges safely and securely across their Windows server, Active Directory, Group Policy and Exchange server environments. DRA performs granular delegation of “least privilege” so that administrators and users receive just the permissions needed to complete their specific responsibilities.

The source code is developed in C++ and C# with design patterns, multithreading, STL.

Roles and Responsibilities

- Windows, C++, C++14, Data structures, Algorithms, Code debugging, STL, multithreading, Design patterns, Debugging, Visual studio 2022 etc.
- Replace Mongo DB with PostgreSQL using Adapter design pattern.
- Deliver new features like extending the support to OSMB, Extension Attributes, Caching Mechanism etc.,
- Write production code, unit tests (UT), integration tests (IT) and code refactoring.
- Diagnose, debug and fix bugs in Production area.
- Participate in weekly code reviews, code Quality meetings.

Senior Consultant (B1)	Capgemini	July 2021 – May 2024
------------------------	-----------	----------------------

Capgemini **Aktaflux** product is semi-automated tangential flow/cross filtration for concentration and diafiltration as well as cell harvesting. The product is available in two versions(S,6). This is used for research and small-scale production. This instrument is having SBC and RTC boards connected by RS-232 cable. This RTC board is having sensors and pumps (feed, transfer, permeate). The source code is developed in C++ by using Observer and MVC (model-view-controller) design patterns, multithreading, STL and QT.

Roles and Responsibilities

- Windows, C++, C++14, Data structures, Algorithms, Code debugging, STL, multithreading, Design patterns, Debugging, SonarQube, Visual studio 2022 etc.
- Diagnose, debug and fix bugs in Production area.
- Mentoring new employees on the product and plan ramp up on code base.
- Participate in weekly code reviews, code Quality meetings.

Technology Analyst	Infosys	December 2017 – July 2021
--------------------	---------	---------------------------

Infosys Finacle is a core banking product that provides universal digital banking functionality to banks. It has web-based modular suite of products such as core banking solution, wealth management solution etc. The source code is developed in C++ and runs on Linux platform. Front end is developed in HTML and XML. SQL is used for database interaction.

Roles and Responsibilities

- Linux, C++, C++11, Data structures, Algorithms, OOPS, STL, multithreading, Design patterns, Code debugging etc.

- Research, design and support the Finacle team of Infosys.
- Analyze the issues raised by customers and provide resolutions based on severity.
- Implement new design or requirement changes in the code and take care of all impacted areas.
- Actively contribute to implementing new features and solve any issue raised by test team or clients.

Education

Vignan's Institute of Information Technology (Vizag, Andhra Pradesh)

May 2017

- B. Tech in Computer science | 76%
- Coursework: C and C++, Java, Data Structures, Algorithms.

Languages and technologies

-
- Data structures and algorithms, C, C++, Java, Python, STL, multithreading, Design Patterns, OOPs, QT, Boost.
 - Windows, Linux, Microsoft Visual Studio, Eclipse.
 - Magic, Azure Dev ops.
